

Soft tissue injury to knee

Information for patients

Outpatient Fracture Care Team: Shared care plan

Orthopaedic Department
Tunbridge Wells Hospital
Tonbridge Road
Pembury
TN2 4QJ

Telephone: 01892-638450

Email: Mtw-tr.fracturecare@nhs.net

This is a follow-up letter to your recent telephone consultation with the Fracture Care Team explaining the ongoing management of your injury. Your case has been reviewed by an Orthopaedic Consultant (bone specialist) and Fracture Care Extended Scope Physiotherapist.

You have sustained a soft tissue injury to your knee. You can walk on your leg as comfort allows. You can use crutches and/or a splint if supplied by A&E. Your knee may be swollen; resting and elevating it will help. Take pain killers as prescribed. If you are worried that you are unable to follow this rehabilitation plan, or have any questions, then please phone the Fracture Care Team for advice.

If you are experiencing pain or symptoms, other than at the site of the original injury or surrounding area, please get in touch using the telephone or email details at the top of this letter.

You will have an appointment with a knee specialist (we aim to see you seven to ten days after your injury) who will assess your knee once the immediate pain and swelling has decreased. The specialist will decide if further treatment or x-rays are required. They will organise these if needed.

If you have not received a letter for this appointment, please contact the number shown at the top of this page.

Please see the picture below to understand where this injury is.

Please follow the management/rehabilitation plan shown below:

| Weeks since injury | Rehabilitation plan |
|---------------------------|--|
| 0-2 | <p>If given a splint in A&E you can wear this as required until your knee specialist appointment. The splint can be removed to apply cold packs and to start gentle exercises shown below. Begin 'Initial exercises'.</p> <p>The splint can be worn either under or over your clothes depending on what you find most comfortable.</p> <p>You are allowed to put weight through the leg as is comfortable, with or without crutches.</p> |
| 2 | <p>You should expect to have an appointment in the Acute Knee Clinic for further assessment and ongoing advice with regards to rehabilitation.</p> |

Initial advice if you have been supplied with a splint

Cold packs:

A cold pack (ice pack or frozen peas wrapped in a damp towel) can provide short term pain relief. Apply this to the sore area for up to 15 minutes every few hours, ensuring the ice is never in direct contact with the skin.

Rest and elevation:

Try to rest the injured knee for the first 24-72 hours to allow the early stage of healing to begin. Raise your ankle above the level of your hips to reduce swelling. You can use pillows or a stool to keep your foot up.

Early weight bearing and exercise:

Early weight bearing (putting weight through your injured leg whilst wearing the splint) helps increase the speed of healing.

Early movement of the ankle and foot is important for circulation.

Follow the exercises below without causing too much pain. These exercises will help the healing process.

Fitting the cricket pad splint

Place the cricket pad splint on the injured leg so that your patella (knee cap) is in the middle hole of the splint, as shown.

Initial exercises to do three times a day:

Static quads:

With your affected leg straight out in front of you, gently tense your thigh muscle and try to flatten your knee further. Hold for 10 seconds and repeat seven to ten times.

Knee flexion and extension:

Gently bend and straighten your injured leg as pain allows, only going as far as you feel comfortable. Repeat seven to ten times.

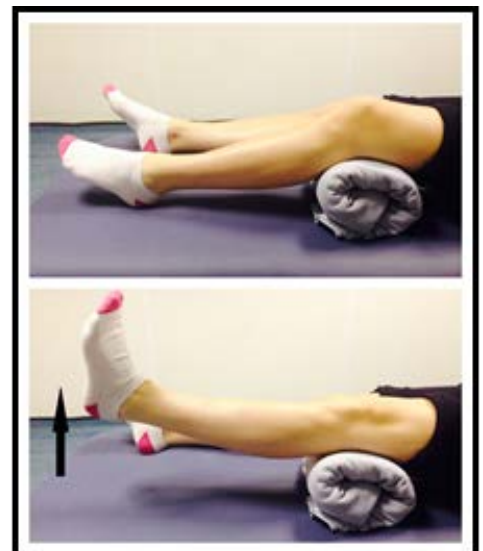

An advanced version of this exercise is to do it sitting in a chair as shown to the right. Try to bend and straighten your injured knee as your pain allows.

Repeat ten times, holding your leg straight for up to five seconds if able.

Inner range quads:

Place a rolled up towel or small pillow under your injured knee as shown in the picture. Tense your thigh muscles and try to straighten your knee. Keep the back of your knee in contact with the towel or pillow.

Repeat ten times, holding your leg straight for up to five seconds if able.

MTW NHS Trust is committed to making its patient information accessible in a range of languages and formats. If you need this leaflet in another language or format please ask one of your clinical care team or the Patient Advice and Liaison Service (PALS). We will do our best to arrange this.

Maidstone and Tunbridge Wells NHS Trust welcomes all forms of feedback from our service users. If the standard of service you have received from the Trust does not meet your expectations, we want to hear from you. Please speak with the ward manager or the nurse in charge in the first instance, or you can contact the **Patient Advice and Liaison Service (PALS)** on:

Telephone:  01622 224960 or  01892 632953

Email: mtw-tr.palsoffice@nhs.net

or visit their office at either Maidstone or Tunbridge Wells Hospital between 9.00am and 5.00pm, Monday to Friday.

You can be confident that your care will not be affected by highlighting any areas of concern or making a complaint. The Trust will retain a record of your contact, which is held separately to any medical records. If you are acting on behalf of a patient, we may need to obtain the patient's consent in order to protect patient confidentiality. More information on PALS or making a complaint can be found on the Trust's website: www.mtw.nhs.uk or pick up a leaflet from main reception.
